

EXTENSION RANGE : Orings and flat gaskets

The compounds used in the production are developed by the Group research centre, the hearth of the entire R&D activity. The high quality standard of the compounds used is guaranteed by very strict control criteria applied to all testing procedures, from the selection of the raw materials to the production and storage of the compounds. This has enabled the company to reach important product certifications such as KTW, WRC, CERISIE, and many others and to satisfy customer specific requirements with unique, purposely devised formulations.

In order to achieve total quality, Group has implemented the most modern monitoring technologies.

The use of 3 D visual technology gives a 100% quality guarantee on the finished parts.

The application of the different principles connected with light refraction, mean that the artificial vision controls connected with this type of technology are capable of detecting and informing the operator of even the smallest of defects, thus ensuring an absolutely perfect finished products.
